

SOLUTIONS FOR SODIUM VAPOR LIGHT APPLICATIONS

Greenhouses provide a temperature-controlled environment with heaters, air ventilation and timed lighting. By controlling the amount of light received, plants tend to yield better productions. Lighting in greenhouses are generally high-pressure sodium lamps referred to as plant grow lights. Grow lights attempt to provide a light spectrum similar to the sun. **To protect a worker's eyes, eyewear should be provided that blocks in the 380 nanometer range and up.**

+ INFINITY BLUE

Commonly used in indoor applications where there is an excessive amount of yellow or sodium vapor light. These lenses offer a high level of contrast.
